

Amendments to the Claims:

The following listing of claims replaces all prior listings, and all prior versions, of claims in the application.

Listing of Claims:

Claims 1-14 (cancelled)

15. (new) A server for use in a vehicle including a first wireless interface providing a connection on a customer basis, for local user terminals to the server, to enable access to local content on the server, and a second wireless interface providing a connection to an external mobile network, to enable access to remote content on remote servers, and a third wireless interface for providing a broadband connection, to an external network, to enable access to remote content on remote servers.

16. (new) A server as in claim 15, comprising detection means for determining a presence of an external network capable of making a broadband connection with the third wireless interface.

17. (new) A server as in claim 16, comprising access control means, responsive to the detection means, for determining utilization of the second and third interfaces.

18. (new) A server as in claim 17, comprising content update means for updating the local content on the server via the third wireless interface.

19. (new) A server as claimed in claim 15 comprising a computer programmed to operate as a world wide web server and including first and second network data adapters providing the first and second wireless interfaces, respectively.

20. (new) A server as claimed in claim 19, wherein a third network data adapter provides the third wireless interface.

21. (new) A method of providing content using a server, which is installed in a vehicle, including a first wireless interface providing a connection to local customer terminals and a second wireless interface providing a connection to an external mobile network, the method comprising providing content located locally in the server and content located in a remote server and accessed by the second wireless interface, updating the local content via a third wireless interface capable of making a broadband connection with an external network, wherein the local and remote content are accessible by a local customer's terminal via the first wireless interface.

22. (new) A method as claimed in claim 21, comprising restricting access by the local customer's terminal to content on remote servers.

23. (new) A method as claimed in claim 21, generating revenue by charging third party companies for storing content locally.

24. (new) A method as claimed in claim 23, wherein the server provides an internet portal to the customers, wherein the method comprises charging a premium to third party companies for links to content stored locally, compared to charges, if any, for links to content stored remotely.

25. (new) A system for providing content, comprising:
a service controller server connected to the internet;
a local server, mounted in a vehicle, and user terminals, wherein the local server is a server as claimed in claim 15 and the user terminals and the local server communicate on a customer basis over a first communication protocol, and the server and the service controller server communicate over a second cellular-system communication protocol, whereby the user terminals can access the local server, and by an internet connection of the local server, remote servers.

26. (new) A system for providing content, comprising:
a core network comprising a plurality of fixed nodes;
a plurality of local servers, storing local content, wherein at least one local server is a server as claimed in claim 15;
a plurality of user terminals which can access the local server; and
wherein
the local servers and the fixed nodes are programmed to operate as a dynamically re-routing mesh or ad-hoc wireless network to facilitate access by the local servers to the core network and then other networks, external to the core network.
